LSP-16 scoring and subscales

All items are answered on an anchored four-point scale, with higher scores indicating a greater degree of disability. In the 16-item version, a score of 3 represents greater dysfunction and a score of 0 represents good functioning. Specific anchor points are provided for each item. For example, in relation to the medication compliance item, the specific anchor points are (0) “reliable with medication”, (1) “slightly unreliable”, (2) “moderately unreliable” and (3) “extremely unreliable”.

A total LSP scale score is calculated by adding individual scores for the whole scale together. Therefore, for the LSP-16, the total score can range from 0 to 48. Items with missing data are excluded from the calculation.

Four subscale scores can be also be calculated by adding together the scores for the items that form each subscale as shown in below.
